

ENERGY AUDIT TOOL

HOW IT WORKS

Maximize the effects of your energy efficiency programs by knowing exactly where your customers stand. ESG has developed the first-of-its-kind product that links your EE program management with your energy audits. The Energy Audit tool, powered by EECPC, can identify areas where a residential or commercial customer can save energy and money, identify rebates that may be available to offset the costs of the improvements, and improve customer satisfaction and trust in your services.

We customize audits within the tool for you to tailor them to specific segments (residential, commercial, industrial, etc.) and configure eligibility rules. As audit data is collected, you receive automated summary reports, savings calculations, and program eligibility tailored to the customer, allowing you to make the best individual recommendations possible.

WHY YOU NEED IT

Capture more than information - capture ongoing results. Track your customers from audit to action. The Energy Audit tool can tell you if a customer signs up for an EE program, if they begin an application but don't finish it, if they actually saved energy, etc. With comprehensive assistance to every step, from audit to installation to recommendations to end reporting, the Energy Audit tool makes your team's job more streamlined and effective than ever.

Optimized Scheduling

Efficiency starts from step one: The Energy Audit tool includes a visual scheduling tool for auditors, which also creates the most efficient daily route.

Real-Time Data Validation

Our tool leads your auditor through data collection based on your predefined rules, and checks the data as you go to ensure that nothing is missed.

Customized Reports

The auditor can further fit recommendations based on their first-hand assessment and customer desires, and produce an individual, real time digital report.

Program Targeting

Centralized audit data makes planning new EE programs easier. Find and target eligible customers for your new program with a simple, custom report.
